## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2 and 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Everitt (6963321) in view of Fan et al. (6141367).

Everitt discloses a passive matrix display device (col. 20-26) for displaying a video image produced by a signal source connected thereto, comprising; a plurality of LED/OLED display elements connected to the signal source and configured for displaying the video image received from the signal source, wherein each the display element displays a predetermined portion of the video image.

Everitt does not disclose the display elements being chiral laser elements.

Fan discloses a light emitting element being a chiral laser light emitting element (col. 4, lines 1-3; col. 10, lines 46-49).

Thus, it would have been obvious to one ordinary skill in the art to substitute Fan's chiral laser light emitting element for Everitt's LED/OLED because the chiral laser light emitting element has better performance, such as higher speed, than the LED/OLED.

3. Claims 3-4 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sito (6404145) in view of Fan et al.

Sito discloses a LCD display device for displaying a video image produced by a signal source connected thereto, comprising: a flat LCD display panel connected to the signal source and configured operable to display the video image received therefrom (Fig. 1): and light source element (col. 4, lines 5-8) positioned behind the flat display panel operable to provide a wide area coherent backlight for the flat LCD display panel.

Sito does not disclose the light source element being a chiral laser element.

Fan discloses a chiral laser light emitting element (col. 4, lines 1-3; col. 10, lines 46-49).

Thus, it would have been obvious to one of ordinary skill in the art to substituted Fan's chiral laser light emitting element for Sito's light source because Sito discloses that any other light source can be used to as the light source element (col. 4, lines 5-8).
